

DIATHERIX Laboratories introduces two new panels:

STD 6 *and* UTI

Due to requests from physicians, DIATHERIX has introduced two new panels:

The **Sexually Transmitted Disease 6 Panel, or STD 6 Panel**, detects molecular targets that identify the following:

Chlamydia trachomatis

Haemophilus ducreyi

Mycoplasma genitalium

Neisseria gonorrhoeae

Treponema pallidum

Trichomonas vaginalis

Recommended specimens are endocervical swab, vaginal swab, urethral swab or urine. Complete instructions for specimen preparation and transport are available in the Client Service Manual that can be found on the DIATHERIX website.

The **Urinary Tract Infection Panel, or UTI Panel**, detects molecular targets that identify the following:

Enterobacter cloacae

Enterococcus faecalis

Escherichia coli

Klebsiella pneumoniae

Proteus mirabilis

Pseudomonas aeruginosa

Recommended specimen is urine. Complete instructions for specimen preparation and transport are available in the Client Service Manual that can be found on the DIATHERIX website.
